

以网站生成为例

- **Vibecoding 主要工具：** Claude（主），ChatGPT（辅）

a. Claude code 下载与部署

IDE 为 VS Code，下载 Claude code 插件

（电脑为 windows 系统，事前安装了 node.js 和 git，API 的话国产 API 用 CC switch）

模型：Opus 4.7

服务器：Vercel

数据库：Supabase

b. 初始的需求文档（直接对话/md 文档）

1. Product Positioning

This project aims to design a clean, elegant, and fully functional resume modification website, specifically for users who need to optimize their

resumes. The website will help users record and manage their interview experiences, optimize their resumes, and automatically provide a match summary between their resume and job descriptions. The website theme will use Morandi tones, emphasizing a simple and user-friendly interface.

2. Target Users

Primary target users:

Job Seekers: Those who have some experience in job searching but want to optimize their resumes to improve job match.

Fresh Graduates: Those entering the job market for the first time who need to constantly adjust and optimize their resumes for different positions.

Career Switchers: Individuals switching industries or roles, particularly into internet-related positions, who need to highlight transferable skills in their resumes.

Specific needs:

Users need to record their interview experiences.

Users want the website to provide a match analysis between their resume and job description.

Users need clear step-by-step modification suggestions to improve their resumes.

Users want interview preparation advice based on their interview experiences.

3. Core User Flow

3.1 User Registration and Login

Users can register and log in via email, social media accounts (Google, GitHub), or phone numbers.

After logging in, users are directed to their personal homepage to begin using resume management features.

3.2 Upload Resume and Job Description

Users can upload their current resume and the job description of their desired position.

The system will automatically recognize and analyze the content of the uploaded resume and job description.

3.3 Resume and Job Description Match Analysis

The system will automatically compare the uploaded resume and job description, generating a match analysis report highlighting the similarities and differences.

Users can view which parts of their resume do not match the job description and proceed with modifications.

3.4 Step-by-Step Resume Modification Suggestions

Based on the match analysis, the system will provide detailed,

step-by-step suggestions for improving the resume. For example:

Enhance skill descriptions.

Strengthen relevant experience related to the job.

Standardize format for better readability.

3.5 Save Interview Experiences

Users can upload and record their interview questions, answers, and feedback after each interview.

The system will generate a summary of each interview and provide preparation advice based on similar job descriptions.

3.6 Interview Experience Summary and Advice

Before applying for the next job, users can review their previous interview experiences. The system will offer interview preparation strategies and tips based on the uploaded job description.

4. Website Design

The website's interface should be clean and elegant, with a Morandi color theme, avoiding complex and cluttered elements.

Clear navigation to ensure users can easily find all necessary functions.

5. Functional Requirements

5.1 Registration and Login

Users should be able to register and log in through email, Google, GitHub,

phone number, etc.

5.2 Resume Upload and Parsing

Users can upload their resumes in various file formats (DOCX, PDF).

The system should automatically extract key information from the resume (name, contact info, education, work experience, etc.).

5.3 Job Description Upload and Analysis

Users can upload job description files.

The system will automatically recognize the key responsibilities, requirements, and skills in the job description and compare them with the resume.

5.4 Match Analysis and Modification Suggestions

The system will generate a detailed analysis report based on the resume and job description comparison.

The system will offer modification suggestions for each section to help users optimize their resumes.

5.5 Interview Experience Recording and Management

Users can upload and record each interview's questions, answers, and feedback.

The system will summarize the interview and provide targeted preparation suggestions based on job descriptions.

5.6 Data Storage and Display

The website will store users' uploaded resumes, job descriptions, and

interview experiences for future reference and modifications.

The user interface should be simple and intuitive, making it easy for users to access past records.

5.7 Clean and Elegant User Interface

The website's color theme should use Morandi tones, with a clean, elegant design.

The functionality should be clearly guided, ensuring users can quickly find all necessary features.

c. 根据需求进行多轮对话调试

例如色系调整，字体调整，图标符号，响应设计等等
